

GUARDAIR CORPORATION INTRODUCES SYPHON SPRAY SYSTEM TO COMBAT COVID-19

Cost-effective, compressed air-powered system sprays cleaners and disinfectants.

Chicopee, MA June 26, 2020 — Guardair Corporation, the largest domestic manufacturer of Occupational Safety and Health Administration (OSHA) compliant safety air guns and pneumatic accessories, has developed an innovative product to spray cleaning solutions and disinfectants onto workplace surfaces to keep employees safe from infection.

Powered by compressed air, the Syphon Spray System is a cost-effective alternative to hiring expensive sanitizing services. Ideal for industrial facilities with in-plant air compressors, the Syphon Spray System provides wide-area spray capability to thoroughly disinfect floors, walls, and workbenches, as well as tools, machinery and equipment.

Featuring a 12" Syphon Spray Gun, the Syphon Spray System delivers up to 16 gallons of liquid per hour. Adjustable nozzle tip controls flow and spray pattern from a steady stream to a light mist. Rugged 20-gallon steel canister stores cleaning solutions with a secure lid to avoid spillage while rolling.

The easy to maneuver Syphon Spray System is dolly mounted and comes complete with push handle. Reach remote locations with 20' syphon hose assembly. All components are suitable for use with common, noncorrosive, disinfecting solutions.

"Performing proactive disinfection to ensure workplaces are safe is critical during these unprecedented times." states Tom Tremblay, President of Guardair. "Our Syphon Spray System offers an innovative solution to spraying disinfectants and reduces the risk of workplace Covid-19 infections."
